SD-480 | DVD PLAYER

This model offers the simple features you need, but with some important additions; as well as playing pre-recorded DVDs and your own edited content, it also allows playback of DivX video and audio files, one of the most popular file compression formats for internet content.

Importantly the SD-480 has an HDMI connection for the lossless transmission of video and audio content, up-scaling standard definition DVD content to 720p, 1080i and 1080p, breathing new life into your existing DVD collection. REGZA Link allows simultaneous operation of multiple devices from a single remote control via the HDMI connection (compatibility dependant).

The SD-480 easily turns any TV into a Hi-Fi with its ability to play MP3 files, whilst its JPEG viewer makes the TV the centre of attention when it's time to review your holiday photos.
